* * SUMMARY PARAGRAPHS EXPLAINING CLIENT'S ATTAINED SCALE SCORES * *

TRUTHFULNESS SCALE: LOW RISK RANGE RISK PERCENTILE:26
This is an accurate DRI-II profile and other scale scores are accurate. This person responded to the DRI-II test items in a nondefensive, cooperative and truthful manner. Denial and distortion are minimal. This person has adequate reading skills and was truthful. The Truthfulness Scale identifies self-protective, recalcitrant and guarded people who minimize or even conceal self-report information.

DEPENDENCY/ABUSE CLASSIFICATION: Three or more of the seven DSM-IV dependency items (or their equivalents) are not admitted to, consequently the classification of 'dependency' as defined here does not apply. However, this person reports (item #84) having been diagnosed 'substance dependent' in the past. By DSM-IV definition, the classification of 'dependency' still applies. This client's self-ratings of their drinking and drug use was 'no problem.' This person's Alcohol Scale score is elevated (at or above the 70th percentile) whereas their Drugs Scale score is not (at or below the 69th percentile) elevated. This profile is not uncommon in the early stages of substance use, or after relapse. The 'once dependent, always dependent' theory is controversial. Some evaluators prefer considering Alcohol and Drugs Scale risk (abuse, dependency, relapse) scores.

ALCOHOL SCALE: PROBLEM RISK RANGE RISK PERCENTILE:81
This person's response pattern on the Alcohol Scale is in the Problem Risk (70 to 89th percentile) range. A drinking or alcohol-related problem is indicated. An interview will establish if this person is a "recovering" alcoholic. Recovering usually means the person has a problem but is abstaining. If recovering, establish the recovery history. Relapse risk is high. Consider counseling (individual or group) and/or attendance at Alcoholics Anonymous (AA) meetings. An alcohol-related problem is indicated. Although this person does not meet the DSM-IV dependency criteria, their scale score indicates that the person does represent a substance use risk. The severity of this client's Alcohol Scale score is an area of inquiry that should be explored in interview. The severity of this person's score reflects problematic substance use.

DRIVER RISK SCALE: MEDIUM RISK RANGE RISK PERCENTILE:69
Some indicators of driver risk are evident. There is a tendency for this person to be aggressive, irresponsible and easily angered while driving. Even under "normal" conditions this person could be an impatient and perhaps unsafe driver. Substance (alcohol or other drugs) use or abuse could increase this person's "driver risk".

DRUGS SCALE: LOW RISK RANGE RISK PERCENTILE:15
This person's response pattern on the Drugs Scale is in the Low Risk (zero to 39th percentile) range. Few, if any, significant indicators of at-risk drug use are evident. If present, drug involvement may be historical, experimental or minimal. Review other DRI scale scores along with the Significant Items in a Structured Interview. This arrest is of concern. An interview will help clarify if substance use is episodic or represents non-habitual abuse. Check if this person is

a recovering substance (alcohol and/or drugs) abuser. If the Truthfulness Scale score is below the 90th percentile and the person is not recovering, then they meet the DSM-IV criteria for dependency. The low Drugs Scale score represents an area of inquiry that could be explored in interview.

STRESS COPING SCALE: MEDIUM RISK RANGE RISK PERCENTILE:63
Although generally manifesting average stress coping abilities, this person's emotions can interfere with judgment--particularly when frustrated, angered, rejected or during periods of substance abuse. Stress does not appear to be a focal issue in this person's adjustment. This score is in the Medium Risk (40 to 69th percentile) range.

SIGNIFICANT ITEMS: The following self-report responses represent areas that may help in understanding the respondent's situation and status.

- ALCOHOL DRUGS
6. Family/Social drinking problems 84. Diagnosed substance dependent
33. Feels guilty about drinking
36. Despite family drinks
84. Diagnosed substance dependent

- DRIVER RISK
20. Gets angry quickly
82. Admits speeds/gets tickets
140. Slightly aggressive driver

SECTION 3: Answers to multiple choice items are printed below:

- 119. No work or household neglect 130. This question does not apply
120. Uses more than intended 131. This question does not apply
121. Has not used when dangerous 132. Rates symptoms: mild
122. No legal problems or arrests 133. No drug treatment programs
123. Continued use despite family 134. States drinking not a problem
124. Not lot of time getting/using 135. Using drugs is not a problem
125. This question does not apply 136. States wants alcohol treatment
126. Continued use despite problems 137. No need for drug treatment
127. Denies increased tolerance 138. Not a "recovering" person
128. Denies withdrawal symptoms 139. Rates alcohol use mild problem
129. Not high/drunken before work etc 140. Slightly aggressive driving
