

DVI PRE-POST COMPARISON REPORT  
 \*\*\*\*\*

NAME : Mr. Example	CONFIDENTIAL INFORMATION
AGE: 39      SEX: Male	SSN OR ID# : 000-00-0000
ETHNICITY/RACE : Caucasian	MARITAL STATUS : Married
EDUCATION/GRADE: H.S. graduate	DATE SCORED: 12/11/2012

The DVI Pre-Post report directly compares pretest scale scores with analogous posttest scale scores.

DVI Pre-Post Comparison Index  
 \* \* \* \* \*

Explanation: DVI Pre-Post Comparison Index is the difference score (pretest score minus posttest score) for each DVI Pre-Post scale. When the pretest score is higher than the posttest score, this index is positive and indicates improvement. When the index is negative the pretest score is lower than the posttest score which signifies that the client is more at-risk now than at the pretest period.

1. TRUTHFULNESS SCALE: Pretest: 33; Posttest: 20      Comparison: +13  
 Comparison of the Truthfulness Scale pretest - posttest scores reveals some improvement, in that this person's posttest scale score is lower than their pretest score. However, their pretest score was at or below the 69th percentile, consequently there may have been little room for improvement.

2. ALCOHOL SCALE:              Pretest: 68; Posttest: 70      Comparison: -2  
 Comparison of the Alcohol Scale pretest - posttest scores reveals slight deterioration. The posttest score is slightly higher than the pretest score which indicates little, if any, meaningful change over the pretest - posttest interval.

3. CONTROL SCALE:              Pretest: 99; Posttest: 84      Comparison: +15  
 Moderate or average Control Scale score improvement over the pretest - posttest interval is evidenced. This client's posttest scale score is lower than their pretest score. Improvement in the posttest risk range score is noted.

4. DRUGS SCALE:              Pretest: 29; Posttest: 29      Comparison: 0  
 Little, if any change is apparent when the Drugs Scale pretest - posttest scores are compared. Since the pretest score was at or below the 69th percentile there may not have been a lot of room for change or improvement. The lower the pretest score the more impressive this posttest score is.

5. VIOLENCE SCALE:              Pretest: 92; Posttest: 57      Comparison: +35  
 Comparison of Violence Scale pretest - posttest scores show solid and substantial improvement. This person's posttest scale score is substantially lower than their pretest scale score.

6. STRESS COPING SCALE: Pretest: 89; Posttest: 72      Comparison: +17  
 Moderate or average Stress Coping Scale score improvement over the pretest - posttest interval is evidenced. This client's posttest scale score is lower than their pretest score. Improvement in the posttest risk range score is noted.

## SIGNIFICANT ITEM COMPARISONS

-----

Significant items consist of direct admissions or unusual responses that may help in understanding the respondent. Items are printed only if they are answered negatively. Significant items are provided for the Alcohol, Drugs, Violence and Control scales.

ALCOHOL:	PRETEST	POSTTEST
	-----	-----
	17. 30 day: drinking problem	17. 30 day: drinking problem
	22. Cannot stop drinking	27. Drinking problem
	32. 30 days: family concerns	32. 30 days: family concerns
	66. 30 days: family problems	37. Goes to AA or RR
DRUGS:	PRETEST	POSTTEST
	-----	-----
	50. Uses pot or coke	50. Uses pot or coke
VIOLENCE:	PRETEST	POSTTEST
	-----	-----
	13. Angry: temper problem	13. Angry: temper problem
	18. Violent temper	43. Threatened & hurt
	38. Tries to get even	68. Worries hurt family
	43. Threatened & hurt	
	55. Lot of people conflicts	
	68. Worries hurt family	
	88. Cannot control temper	
CONTROL:	PRETEST	POSTTEST
	-----	-----
	21. Family resents his control	46. Fam complains: controlling
	26. Intimidates others	52. At home in charge
	46. Fam complains: controlling	71. Dominates at home
	52. At home in charge	80. Good at controlling
	59. Intimidates to get own way	
	61. Dominates & controls	
	71. Dominates at home	
	80. Good at controlling	
	85. 30 days domestic violence

No diagnosis should be based on DVI Pre-Post comparison results. These results are confidential and are working hypotheses. They are a straight forward comparison of pretest and posttest scale scores.

Four behavior categories are selected for pretest-posttest comparison: alcohol, drugs, violence and control. The client's responses are presented for pretest and posttest. Answers are listed for comparison.

	---ANSWERS---	
ALCOHOL:	PRETEST	POSTTEST
	-----	-----
Self-rated drinking problem (#132)	#3) Slight	#3) Slight
Motivation for treatment (#136)	#3) Slight	#4) No desire
Ten point rating scale (#139)	#2) 3, 4 or 5	#2) 3, 4 or 5
Drinking in last 30 days (#143)	#2) Stayed same	#3) Better

	---ANSWERS---	
DRUGS:	PRETEST	POSTTEST
	-----	-----
Self-rated drug use problem (#133)	#4) No problem	#4) No problem
Motivation for treatment (#137)	#4) No desire	#4) No desire
Ten point rating scale (#140)	#1) 1 or 2	#1) 1 or 2
Drug use in last 30 days (#144)	#4) No drugs	#4) No drugs

	---ANSWERS---	
VIOLENCE:	PRETEST	POSTTEST
	-----	-----
Self-rated temper problem (#134)	#3) Slight	#3) Slight
Self-rated domestic violence (#135)	#3) Slight	#3) Slight
Motivation for counseling (#138)	#3) Slight	#3) Slight
Ten point rating scale (#141)	#2) 3, 4 or 5	#2) 3, 4 or 5
Violence in last 30 days (#145)	#3) Stayed same	#4) Less violent

	---ANSWERS---	
CONTROL:	PRETEST	POSTTEST
	-----	-----
Ten point rating scale (#142)	#3) 6, 7 or 8	#2) 3, 4 or 5
